Understanding Bone Fractures - WebMD A fracture is the medical term for a broken bone. Fractures are common; the average person has two during a lifetime. They occur when the physical force exerted on the bone is stronger than the. Fractures (Broken Bones) - OrthoInfo - AAOS Common types of fractures include: Stable fracture. The broken ends of the bone line up and are barely out of place. Open, compound fracture. The skin may be pierced by the bone or by a blow that breaks the skin at the time of the fracture. The bone may or may not be visible in the wound. Transverse fracture. Fractures: Types, causes, symptoms, and treatment A fracture caused by a disease or condition is known as a pathological fracture. We examine the facts about fractures in this article. A fracture is when the continuity of a bone is broken.

Bone fracture - Wikipedia A bone fracture may be the result of high force impact or stress, or a minimal trauma injury as a result of certain medical conditions that weaken the bones, such as osteoporosis, osteopenia, bone cancer, or osteogenesis imperfecta, where the fracture is then properly termed a pathologic fracture. Stress Fractures of the Foot | Symptoms & Treatment Common stress fractures are of the 2nd or 3rd metatarsal bone which is sometimes called a march fracture because soldiers running in boots often get it! A stress fracture at the base of the 5th metatarsal is known as a Jones Fracture and can require surgical fixation. Fractures | definition of Fractures by Medical dictionary Fractures are termed complete if the break is completely through the bone and described as incomplete or "greenstick" if the fracture occurs partly across a bone shaft. This latter type of fracture is often the result of bending or crushing forces applied to a bone.

Stress fractures - Symptoms and causes - Mayo Clinic Stress fractures are most common in the weight-bearing bones of the lower leg and foot. Track and field athletes and military recruits who carry heavy packs over long distances are particularly susceptible, but anyone can have a stress fracture.
